Twin Cities Campus
Spanish Studies B.A.
Spanish & Portuguese
College of Liberal Arts

• Program Type: Baccalaureate
• Requirements for this program are current for Fall 2012
• Required credits to graduate with this degree: 120
• Required credits within the major: 34
• Degree: Bachelor of Arts

The program develops analytical skills and methodologies needed to explore Hispanic and Hispanic-American languages and cultures.

It is important to note that department majors and minors are not simply Spanish and Portuguese language majors or minors; rather, they are liberal arts majors and minors concentrating on Spanish, Latin American, and/or Luso-Brazilian literary, cultural, and linguistic studies with language skills at the foundation. All major and minor options in this department begin with prerequisite language courses, followed by advanced language skills courses (special arrangements may be made for native speakers of Spanish or Portuguese). These are followed by critical analysis skills courses in Hispanic literature, culture, and linguistics that prepare students to take advanced coursework in specific areas. The major options culminate in the completion of a senior project through a SPAN 5xxx course or SPAN 3972W.

Majors are required to enroll in a minimum 6-week study abroad experience, or a semester-long service learning course. The study abroad requirement must be fulfilled in a Spanish-speaking country, involve coursework in Spanish, and include courses related to Spanish studies. Students must meet with the department adviser prior to departure. The service learning requirement is fulfilled by SPAN 3401, or SPAN 3404, or other courses with adviser consent.

Detailed information regarding Spanish and Portuguese studies undergraduate academic issues is printed in the Undergraduate Advising Handbook (available at http://spanport.cla.umn.edu).

Program Delivery
This program is available:
• via classroom (the majority of instruction is face-to-face)

Admission Requirements
For information about University of Minnesota admission requirements, visit the Office of Admissions website.

General Requirements
All students are required to complete general University and college requirements including writing and liberal education courses. For more information about University-wide requirements, see the liberal education requirements. Required courses for the major or minor in which a student receives a D grade (with or without plus or minus) do not count toward the major or minor (including transfer courses).

Program Requirements
Students are required to take 4 semester(s) of Spanish.

The Spanish Studies major is completed by a minimum of 34 credits and 11 courses and requires that students take at least 5-6 semesters of language above and beyond the CLA second language requirement. Spanish courses taken in fulfillment of CLA’s second language requirement (SPAN 1001-1004 or their equivalents) do not count toward the major. Students pursuing a second CLA major may choose to complete the senior project requirement in their other major. These students are required to substitute 3 credits of advanced SPAN electives with a 31xx prereq for SPAN 3972W. Students must complete 6 major courses in residence: three can be taken at the UMNTC campus or through sponsored study abroad programs. The other 3 must be advanced electives courses (requiring a SPAN 31xx pre-requisite) and must be taken at the UMNTC campus (including the senior project).

Students may receive no more than one degree from the Dept of Spanish & Portuguese Studies: a B.A. in Spanish Studies or a B.A. in Spanish & Portuguese Studies or a minor in Spanish Studies or a minor in Portuguese Studies.

Beginning fall 2012, all incoming CLA freshman must complete the appropriate First Year Experience course sequence. Specific information about this collegiate requirement can be found at: http://class.umn.edu/degree_requirements/index.html

Studies in Cinema and Media Culture B.A.
Cultural Studies & Comparative Literature
College of Liberal Arts

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2012
- Required credits to graduate with this degree: 120
- Required credits within the major: 33 to 40
- Degree: Bachelor of Arts

Studies in Cinema and Media Culture (SCMC) examines cinema by emphasizing its location within the intricate social, historical, and cultural matrix of audiovisual forms and practices. Core courses and electives are offered not only in the Department of Cultural Studies and Comparative Literature (CSCL), but also in a number of other contributing departments. Through the program's interdisciplinary framework, students explore the sounds and images of cinema as they have changed throughout the 19th and 20th centuries. Print, photography, radio, television, video, and digital media are also considered crucial to understanding the medium. Students develop the ability to "read" the production and circulation of meaning in cinema, especially within the institutions of mass culture; examine the history of cinema cultures; engage the cross-cultural and global dynamics of cinema production and reception; and explore the theoretical models that have shaped thinking about the cinema and its relations to other media.

Although the major includes a production component, its principal focus is on cultural contexts, history, and theory.

Effective fall 2001, the Studies in Cinema and Media Culture major replaced the Film Studies major. Currently-declared Film Studies majors have the option of either completing their degree in Film Studies or transferring to the new SCMC major. The director of undergraduate studies can help students transfer programs.

For the latest information on the SCMC major, visit the CSCL website.

General Requirements
All students are required to complete general University and college requirements including writing and liberal education courses. For more information about University-wide requirements, see the liberal education requirements. Required courses for the major or minor in which a student receives a D grade (with or without plus or minus) do not count toward the major or minor (including transfer courses).

Program Requirements
Students are required to take 4 semester(s) of any second language.

All major courses must be taken A-F.

In addition to the courses below, the department maintains a list of current-semester courses that also count toward the major. Please visit http://cscl.umn.edu/ugrad/scmccourselists.html for an updated list of approved courses.

Note on topics courses, directed studies, and internships: students may count up to three toward the major, but no more than two in any one category (two topics courses; two directed studies/internships). Such courses may be counted in Section C with prior approval as long as they appear on the current-semester SCMC-approved list. Directed studies and internships may also be counted in Section C with prior written approval from the SCMC undergraduate adviser or the director of undergraduate studies. In rare cases, such courses may be used in Section B, but only with prior written approval. For both internships and directed studies, students work with a faculty member of their choice to complete and submit a Faculty/Student Contract outlining the goals and scope of coursework. The course number of the internship or directed study should be selected appropriate to the home department (3993, 4993, or 5993).

Students may earn a B.A. or a minor in studies in cinema and media culture, but not both.

Beginning fall 2012, all incoming CLA freshman must complete the appropriate First Year Experience course sequence. Specific

Current departmental honors course offerings are listed at:
http://www.honors.umn.edu/academics/curriculum/dept_courses_current.html

Honors students complete an honors thesis project in the final year, most often in conjunction with an honors thesis course, or with an honors directed studies, or honors directed research course. Students select honors courses and plan for a thesis project in consultation with their UHP adviser and their departmental faculty adviser.

Aerospace Engineering and Mechanics B.A.E.M.

College of Science and Engineering

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2012
- Required credits to graduate with this degree: 124
- Required credits within the major: 70
- Degree: Bachelor of Aerospace Engineering and Mechanics

The mission of the bachelor of aerospace engineering and mechanics (B.A.E.M.) program is to produce graduates who are prepared to enter and sustain the practice of aerospace engineering and related fields, or to pursue advanced studies. This mission is consistent with the mission of the University of Minnesota in learning and teaching, and with the mission of the College of Science and Engineering: to provide a rigorous and stimulating education for its undergraduate majors and to provide programs of instruction in engineering that meet nationally accepted standards for practice of the profession of engineering.

Aerospace engineering is a multidisciplinary field that encompasses many areas of science and engineering and plays a major role in the technological advancement of society. As a constantly changing profession, aerospace engineering is concerned with a wide range of problems and the latest technologies. An aerospace engineer must have a comprehensive fundamental education in mathematics, physical sciences, and engineering sciences. The four-year program leading to the B.A.E.M. provides this broad background. The program is accredited by the Engineering Accreditation Commission of ABET.

EIP
This sub-plan is optional and does not fulfill the sub-plan requirement for this program.

This option provides students with hands-on work experience after freshman year of the degree program. Students can take up to two semesters of intern work with one or more employers. An example may be two summers and one semester. This may be adjusted to suit individual needs. Students have an opportunity to assist in design work and apply their knowledge to practical problem solving. The experience helps students choose a career and select electives for the degree.

During the academic portion of the intern program, students are expected to take a normal load of 11-13 credits. Graduation may be delayed because of the intern experience. It is important to plan ahead, since biosystems and agricultural engineering classes are usually offered only once per year, and in some cases, alternating years. Students registering for BBE 4900 must first submit a proposed plan of study with the intern coordinator.

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2012
- Required credits to graduate with this degree: 125
- Required credits within the major: 70
- Degree: Bachelor of Chemical Engineering

Chemical engineering deals with operations such as materials handling, mixing, fluid flow and metering, extrusion, coating, heat exchange, filtration, drying, evaporation, distillation, absorption, extraction, ion exchange, combustion, catalysis, and processing in chemical and biochemical reactors.

Because many industries are based on some chemical or physical transformation of matter, chemical engineers are much in demand. They may work in the manufacture of inorganic products (fertilizers, paints, ceramics, electronic materials); in the manufacture of organic products (polymers, films, papers, Petrochemicals); in the manufacture of batteries and fuel cells; in the processing of minerals and materials; in food processing and fermentation; or in the production of antibiotics and biochemical products.

College of Science and Engineering

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2012
- Required credits to graduate with this degree: 120
- Required credits within the major: 41
- Degree: Bachelor of Science in Chemistry

The mission of the Department of Chemistry is to enrich the science of chemistry through the education of students from all disciplines, the training of future professional chemists, and the pursuit of knowledge.

Chemistry probes the fundamental concepts of nature and helps us understand the world around us. It deals with all substances at the molecular level: their composition, their properties, and how they are transformed into new substances. Chemistry is a central science of great importance to society. It provides a broad range of opportunities in many specialized fields, including biotechnology, polymer chemistry, environmental chemistry, materials chemistry, and medicine.

After graduating with a bachelor's degree, many chemistry majors go on to graduate or professional schools to pursue advanced degrees. Other graduates find employment in industry, education, or government.

College of Science and Engineering

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2012
- Required credits to graduate with this degree: 125
- Required credits within the major: 65 to 72
- Degree: Bachelor of Computer Engineering

The mission of the computer engineering program is to educate students in core topics, as well as in a broad set of specialties of computer engineering; to impart students with professional attributes that characterize a well-schooled engineer and citizen; and to provide students with opportunities for research experience in one of the leading computer engineering centers of scholarship.

The field of computer engineering resulted from the tremendous development of computers and, in particular, the evolution of microprocessors. The design process for almost every electronic system includes the specification and development of the control program for the system's microprocessor. A particular computer engineering job can be more closely related to hardware or software, to functional design or detailed design. The B.Comp.Eng. degree provides the background necessary for persons, with continuing study, to work in many computer engineering subfields. The bachelor's degree itself does not, however, provide highly specialized knowledge in any particular subfield.

Program Delivery
This program is available:

Students must complete 9 courses before admission to the program.

Freshman and transfer students are usually admitted to pre-major status before admission to this major.

Students interested in pursuing a degree in computer engineering or electrical engineering are encouraged to take EE 1001 in their first year.

**Program Sub-plans**
A sub-plan is not required for this program.

**Honors UHP**
This is an honors sub-plan.

Students admitted to the University Honors Program (UHP) must fulfill UHP requirement, in addition to degree program requirements. Honors courses used to fulfill degree program requirements will also fulfill UHP requirements.

Current departmental honors course offerings are listed at:
http://www.honors.umn.edu/academics/curriculum/dept_courses_current.html

Honors students complete an honors thesis project in the final year, most often in conjunction with an honors thesis course, or honors directed studies, or honors directed research course. Students select honors courses and plan for a thesis project in consultation with their UHP adviser and their departmental faculty adviser.

Qualified students may elect to participate in the senior honors design course. This two-semester, 2-credit per semester course is taken senior year and under the direction of a faculty adviser. Advance permission is required to register for the sequence.
Computer Science B.S. Comp.Sc.

Program Type: Baccalaureate
Requirements for this program are current for Fall 2012
Required credits to graduate with this degree: 120
Required credits within the major: 77 to 79
Degree: Bachelor of Science in Computer Science

Computer science is concerned with the study of hardware, software, and theoretical aspects of high-speed computing devices and with the application of these devices to scientific, technological, and business problems.

A bachelor's degree gives students a basic understanding of computer science. After completing a required set of fundamental courses, students arrange their subsequent work around one of several upper division tracks within either computer science or an interdisciplinary area involving computer applications. The degree prepares students for graduate work or for various industrial, governmental, and business positions involving the use of computers.

Program Delivery
This program is available:
• via classroom (the majority of instruction is face-to-face)

Admission Requirements
Students must complete 5 courses before admission to the program.

Freshman and transfer students are usually admitted to pre-major status before admission to this major

Custom Track
In rare instances, students may create their own track. Such tracks must be approved by a CSci advisor before the elective courses constituting it are taken. Approval is not automatic; in particular, custom tracks must be highly coherent, sufficiently advanced, in accordance with a computer science degree, and aligned with the student's career goals.

Program Sub-plans
A sub-plan is not required for this program.

Honors UHP
This is an honors sub-plan.

Students admitted to the University Honors Program (UHP) must fulfill UHP requirements, in addition to degree program requirements. Honors courses used to fulfill degree program requirements will also fulfill UHP requirements.

Current departmental honors course offerings are listed at:
http://www.honors.umn.edu/academics/curriculum/dept_courses_current.html

Honors students complete an honors thesis project in the final year, most often in conjunction with an honors thesis course, or with an honors directed studies, or honors directed research course. Students select honors courses and plan for a thesis project in consultation with their UHP adviser and their departmental faculty adviser.

- Degree: Bachelor of Science in Earth Sciences

Earth sciences is the study of the composition, structure, and history of the Earth and of the processes that operate on and within it, with emphasis on the crust, oceans, and atmosphere. The department's programs emphasize applications of physics, chemistry, and biology to understanding the Earth.

Earth scientists are employed in a wide range of fields, including exploration for and development of natural resources (hydrocarbons, minerals, groundwater); environmental science; urban planning; education; and oceanography. Potential employers include the oil, gas, and minerals industries; environmental consultants; federal and private research institutions; universities; schools; and government agencies. An advanced degree is usually required for a career in research or teaching.

This program is available:
- via classroom (the majority of instruction is face-to-face)

Admission Requirements
Students must complete 5 courses before admission to the program.

Freshman and transfer students are usually admitted to pre-major status before admission to this major

Students interested in the earth sciences as a major may want to consider taking ESCI 1001 or other ESCI 1xxx course, which can be counted as an elective.

- Program Type: Baccalaureate
- Required credits for this program are current for Fall 2012
- Required credits to graduate with this degree: 126
- Required credits within the major: 65 to 70
- Degree: Bachelor of Electrical Engineering

The mission of the electrical engineering program is to educate students in core topics, as well as in a broad set of specialties of electrical engineering. The program will impart students with professional attributes that characterize a well-schooled engineer and citizen and provide opportunities for research experience in one of the leading electrical engineering centers of scholarship.

Electrical engineers work in highly diverse areas such as computers, telecommunications, semiconductors, electric energy, consumer and entertainment electronics, biomedical technology, defense and aerospace systems, and automotive electronics. They design and develop components, software, and systems, and work in research, management, and sales. The bachelor of electrical engineering prepares students for immediate entry into professional work, for graduate study and further specialization in engineering, for advanced work in business and management, or for study in a different direction such as medicine.

- Degree: Bachelor of Geological Engineering

The mission of the geoengineering program comprises three overlapping and mutually supportive components:
* Prepare students to become productive engineers and contributing members of their professional community.
* Prepare students for continual learning and professional development.
* Prepare students for formal advanced education.

The program has four core objectives:
1. Produce graduates with a strong fundamental scientific and technical knowledge base and critical thinking skills required for engineering problem formulation and problem solving.
2. Produce graduates with the ability to work as professional team members. This includes the ability to communicate effectively through both oral and written language.
3. Produce graduates with an understanding of their obligations as professional geological engineers to protect human health, welfare, and the environment.
4. Ensure that graduates have had opportunities to complement their academic studies with scholarly (research) investigations, co-ops, and internships.

The mission of the program is to provide high-quality mathematics instruction in a stimulating intellectual atmosphere. The goal is to educate students at all levels to provide cultural enrichment, to give them the analytic tools they need to become responsible citizens, and to prepare them for careers involving mathematics.

The School of Mathematics offers a program leading to the bachelor of science degree. The course of study is flexible and may be adapted to satisfy a wide variety of interests and needs. Students may prepare for graduate study in mathematics or emphasize various fields of interest, such as preparation for secondary school teaching, actuarial science, or programs in applied mathematics, including industrial mathematics, biology, mathematics applicable to computer science, and numerical analysis. Students in the ME EIP program (engineering intern program or Co-op program) register for three industrial assignment courses. ME 3041 (2 credits), ME 4043W (4 credits), and ME 4044 (2 credits) for a total of 8 credits. These courses are used in place of two technical electives.

Students register for industrial assignments as they would for regular classes. Requirements for the course include writing a summary of an article in a technical journal, attending a workshop (ME 3041, ME 4043W), submitting a report draft, and writing a final report. The course grade is based on writing; work performance cannot be considered in assigning a grade. The second industrial assignment, ME 4043W, is oriented toward solving a design problem and fulfills a 4-credit intensive writing course requirement. Cooperation from...
company personnel is required in accomplishing most reports, particularly the ME 4043W reports.

**Internship**
- ME 3041 - Industrial Assignment I (2.0 cr)
- ME 4043W - Industrial Assignment II [WI] (4.0 cr)
- ME 4044 - Industrial Assignment III (2.0 cr)

**Honors UHP**
This is an honors sub-plan.

Students admitted to the University Honors Program (UHP) must fulfill UHP requirements, in addition to degree program requirements. Honors courses used to fulfill degree program requirements will also fulfill UHP requirements.

Current departmental honors course offerings are listed at:
http://www.honors.umn.edu/academics/curriculum/dept_courses_current.html

Honors students complete an honors thesis project in the final year, most often in conjunction with an honors thesis course, or with an honors directed studies, or honors directed research course. Students select honors courses and plan for a thesis project in consultation with their UHP adviser and their departmental faculty adviser.

**Honors**
The honors thesis extends over two semesters. Students register for ME 4081 the first semester (2 credits) and ME 4082 during the second semester (2 credits). Credits earned during the second semester may be applied to the technical electives requirement. Formal written theses must be submitted and presented orally by students during their final semester. Students are encouraged to form contacts late in the junior year with potential faculty advisers for the honors thesis.

Actuarial Science B.S.B.
Finance
Curtis L. Carlson School of Management

• Students will no longer be accepted into this program after Fall 2008. Program requirements below are for current students only.
• Students interested in actuarial science can apply to the Institute of Technology or College of Liberal Arts; each offers an actuarial science specialization through its mathematics program.

• Program Type: Baccalaureate
• Requirements for this program are current for Fall 2012
• Required credits to graduate with this degree: 120
• Required credits within the major: 23
• Degree: Bachelor of Science in Business

Actuarial science applies mathematics to insurance problems. Practicing actuaries calculate insurance premiums, policy and loss reserves (liabilities), and estimate costs of future losses.

Students are introduced to professional organizations, including The Society of Actuaries, American Academy of Actuaries, Casualty Actuarial Society, Conference of Consulting Actuaries, and American Society of Pension Actuaries. Students typically take at least two professional actuarial examinations before graduation.

There are multiple career opportunities for students with the mathematics, business, and communication skills developed through the actuarial science major. The insurance and actuarial community strongly supports this program.

The Carlson School Honors program offers students access to a richer undergraduate experience. Honors students have closer contact with their professors. They work in smaller classes and they put their skills to work for the benefit of the community. The program requires hard work and a strong commitment to learning.

Program Delivery
This program is available:
• via classroom (the majority of instruction is face-to-face)

Admission Requirements

Students who pursue this major should have a particular career goal or objective in mind that can be best addressed through a self-designed program of study.

The Carlson School Honors program offers students access to a richer undergraduate experience. Honors students have closer contact with their professors. They work in smaller classes and they put their skills to work for the benefit of the community. The program requires hard work and a strong commitment to learning.

The nonprofit sector is one of the most important components of American life, yet one of the most misunderstood. Nonprofit organizations vary enormously in scope and scale, ranging from grassroots charitable groups to multimillion dollar foundations, university, and health care organizations. There is little doubt that every American is directly or indirectly touched by the services of nonprofits in their daily life.

The nonprofit major blends general management-focused courses from the Carlson School with nonprofit-focused courses from the Humphrey Institute of Public Affairs. All students complete an additional major within Carlson; therefore, every student is able to apply their functional specialty of business to the intricacies of the nonprofit sector.

Supply chain management manages the flow of goods, information, and services in order to deliver maximum value to the consumer while minimizing the costs of the flow. It is an integrative process across functions within a firm and between trading partners. It is also considered an essential strategy for product-oriented firms as they seek competitive advantage.

The Carlson School honors program offers students access to a richer undergraduate experience. Honors students have closer contact with their professors. They work in smaller classes and they put their skills to work for the benefit of the community. The program requires hard work and a strong commitment to learning.

Program Delivery
This program is available:
- via classroom (the majority of instruction is face-to-face)

Admission Requirements
Students must complete 50 credits before admission to the program.

A GPA above 2.0 is preferred for the following:
- 3.00 transferring from another University of Minnesota college
- 3.00 transferring from outside the University

Freshmen are admitted to Carlson School of Management, but do not declare a major until 50 credits have been completed. Part of the 50 credits should include the five tool courses and liberal education requirements. Those transferring in as sophomores need to complete microeconomics, macroeconomics, and calculus before admission. Juniors and above need to complete microeconomics, macroeconomics, calculus, business statistics, and accounting before admission.

For information about University of Minnesota admission requirements, visit the Office of Admissions website.

Apparel design students learn to design, produce, and market apparel products by developing the creative thinking and technical expertise to address contemporary issues while using industry technologies, communicating design ideas, and gaining an understanding of the global apparel industry. The program incorporates custom design and industry production approaches and features projects that emphasize fashion and function. The program focuses on a research-based design process used by many design industries, and courses incorporate industry-sponsored projects and community service projects. Studio courses closely replicate the professional working methods of apparel designers. In addition to providing a strong liberal arts curriculum, courses offer essential background in costume history, consumer behavior, and social and cultural meanings of apparel. A required internship and mentor experience provides students with professional experience. An annual fashion show presents students' achievements to the professional community.

Students enter the program as pre-apparel design majors. To attain full major status, they must complete six required pre-apparel design courses with a grade of at least C-, maintain a 2.50 GPA, and pass a competitive portfolio review. Students entering the program should also have apparel construction/assembly competence and a working knowledge of microcomputers and software.

To complete the major, students must take six sequential apparel design studio courses. They are also encouraged to use the liberal education categories to explore multicultural themes and to strengthen knowledge that supports their major coursework.

Graduates of the program work in various settings, including product development and quality assurance for large retail companies, product design for small and large manufacturers, theater and film design, wearable art, and custom design.

The program requires an understanding of social, cultural, and physical contexts as a foundation for the examination of the methods, values, precedents, and material reality characteristic of the process of shaping natural and built environments. The major combines core prerequisites with a focused introduction to the discipline of architecture, including required courses in representation, history, theory, technology, and design processes.

**Program Delivery**  
This program is available:

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2012
- Required credits to graduate with this degree: 120
- Required credits within the major: 79 to 91
- Degree: Bachelor of Fine Arts

The graphic design program educates students in design thinking, design methods, design theory, creative problem solving, and visual and verbal literacy. An emphasis is placed on visual components: how humans communicate, perceive, interpret, and understand visual information. The program fosters flexibility, which enables graduates to adapt to social, cultural, and technological change in graphic design. The program's foundation is broadly based. Students begin with courses in fundamental aspects of visual studies. Upper division courses prepare them for graphic design positions in print and electronic media. An internship of 1-3 credits is required.

Program Delivery

This program is available:
- via classroom (the majority of instruction is face-to-face)

Admission Requirements

Students must complete 5 courses before admission to the program.

In addition, students must receive a minimum grade of C- or better in the required pre-major courses before going through portfolio review (not just a 2.50 GPA). Once students have achieved major status, they must maintain a GPA of 2.00.

Students must be admitted to the pre-major status program to take most of the pre-graphic design coursework.

A sub-plan is not required for this program.

Honors UHP
This is an honors sub-plan.

Students admitted to the University Honors Program (UHP) must fulfill UHP requirements in addition to degree program requirements. For any course required in a degree program, UHP students must register for the honors version if one is offered. Honors courses used to fulfill degree program requirements will also fulfill UHP requirements.

College of Design students in honors programs complete sophisticated academic and creative projects that provide intensive learning experiences. In the final year, students must complete an honors project.

- Program Type: Baccalaureate
- Requirements for this program are current for Fall 2012
- Required credits to graduate with this degree: 120
- Required credits within the major: 68 to 80
- This program requires summer terms.
- Degree: Bachelor of Science

The housing studies program allows students to study shelter in its multiple dimensions. Coursework in the program includes social and behavioral sciences, economics, public policy, planning, and technology.

After first acquiring a broad background of housing courses, students select one of five areas of concentration: community development and policy, housing technology, management and finance, selected populations, or sustainability.

The housing studies program provides the academic background and professional preparation needed for graduate studies leading to college teaching, research, or planning/administrative positions.

Depending upon prior coursework, the housing studies major requirements can often be completed in two years. Students are encouraged to meet with an adviser to discuss their specific situations.

Interior design is a professional program accredited by the Council for Interior Design Accreditation (CIDA). Its focus is providing for human welfare by improving the quality of life and protecting human health and safety through design of the interior environment. Students study fundamentals, theory, process, communication, research, and technology to identify and solve problems related to people and their use of interior space. They analyze human behavior to determine clients' functional, aesthetic, social, and psychological needs, which prepares them to solve interior design problems. They design various types of interiors such as hospitals, offices, schools, residences, restaurants, hotels, and entertainment facilities. To do this, students acquire
* a foundation in basic design;
* understanding of the relationship between individuals and their environments;
* understanding of the contextual relationship of the site, the building, and its systems to the interior;
* knowledge of regulations that govern their practice of interior design;
* the ability to research users' needs and apply their findings to problem identification and solution;
* understanding of historical precedent and contemporary design theories;
* technical knowledge and communication skills;
* understanding of business issues and professional ethics; and
* a sense of responsibility to society, especially in the use of resources.

Program Delivery
This program is available:
• via classroom (the majority of instruction is face-to-face)

Admission Requirements
Students must complete 7 courses before admission to the program.

Freshman and transfer students are usually admitted to pre-major status before admission to this major.

Landscape Design and Planning B.E.D.
Landscape Architecture
College of Design

• Program Type: Baccalaureate
• Requirements for this program are current for Fall 2012
• Required credits to graduate with this degree: 120
• Required credits within the major: 77 to 83
• Degree: Bachelor of Environmental Design

Landscape design and planning focuses on the creation of livable communities that sustain ecological function, fulfill human aspirations for community development, public health, and safety, and are artistically evocative and meaningful. Core courses in design and planning introduce students to the history, theory, and practice of landscape design and planning at various geographic scales and in diverse settings. Students create integrative, collaborative, and beautiful designs for regions, communities, and sites to conserve ecosystems services and water and air resources, protect biodiversity, and to reduce dependence on fossil fuels.

Honors students are required to complete one sub-plan plus the honors sub-plan. Please see an adviser if no honors sub-plan is listed for the program.)

Accelerated Program
This sub-plan is optional and does not fulfill the sub-plan requirement for this program.

The accelerated status option admits a limited number of students annually and allows qualified undergraduates to complete the B.E.D. and M.L.A. in six years rather than seven years.

Applicants for the accelerated status must complete the first three years of the B.E.D. degree requirements before their senior year. Students must complete the first year of the professional degree program in their undergraduate senior year. These courses carry upper division credit and satisfy senior year B.E.D. requirements.

Accelerated status is granted on a competitive basis and does not admit any student to the graduate professional program. Separate requirements, such as letters of recommendation, a letter of interest, and other application documents, must be submitted in January of the year that students are seeking admission to the graduate program. B.E.D. graduates who have completed the accelerated status option and applied to the M.L.A. professional degree program will receive advanced standing in the M.L.A. program upon acceptance by the Department of Landscape Architecture and the Graduate School.

One of the greatest challenges facing the world in the 21st century is jointly sustaining the environment, as well as human health and well-being. The sustainability studies minor provides students from across the University with a unique opportunity to address this sustainability challenge. Students will explore the fundamental ecological, social, ethical, political, and economic forces that influence the long-term quality and viability of human society and the natural environment. The introductory core course provides a conceptual overview of various models for understanding sustainability, and uses case studies to demonstrate the challenges of putting sustainability into practice. Additional electives are chosen from courses that explore multiple disciplinary perspectives related to sustainability. Finally, the capstone experience allows students to synthesize and apply their knowledge to real sustainability problems.

For this minor, students must complete 6 credits of required courses for the core and the capstone, and 9-12 restricted electives, for a total of 15-18 credits.

The design minor is an interdisciplinary program that shows how design can be used as a catalyst for exploration and research. Choosing from a selection of both lecture and studio courses, students are introduced to the history, theory, and practice of design across multiple design disciplines. With the design minor, students may compose their own individual program in which they will understand the interdisciplinary nature of the design process, appreciate the role design plays in everyday life, experience design thinking and action, explore and expand their own design interests, and understand how to work with designers in their chosen field.

The design minor provides an integrated education in design where students enhance their learning by making connections between traditional design courses and nontraditional views of design.

- Required credits in this minor: 20 to 22

Biology is the scientific exploration of the diverse world of living organisms. Today, biological research spans an almost infinite spectrum of studies from molecules to ecosystems. The field of biology has expanded enormously within the past four decades.

Within a flexible curriculum, the biology minor provides an opportunity for non-CBS students to gain a broad understanding of the fundamental nature and characteristics of living things, or explore specific areas of the field in greater depth. The minor offers great freedom for students to select coursework that is most relevant to their interests and academic goals.

The biology minor is available to non-CBS students only. Due to significant course overlap, the following majors are not eligible to complete the biology minor:
* Biology, society, and the environment
* Physiology
* Clinical laboratory sciences
* Nutrition (nutritional sciences sub-plan only)
* Fisheries and wildlife (all sub-plans)
* Individually designed programs with a life sciences emphasis

Additionally, students completing a microbiology minor are not eligible for the biology minor.

Students interested in declaring a biology minor can do so online at the College of Biological Sciences website.

Program Delivery
This program is available:
- via classroom (the majority of instruction is face-to-face)

Minor Requirements
To count for the biology minor, all courses must be taken A-F and receive a grade of C- or higher (or an S in Directed Research or Directed Studies). Courses that are cross-listed with CBS designators may be allowed for use in the minor. Up to 3 credits from a transfer institution (including those taken abroad) may be applied toward the 12 elective credits. In order to count for the biology minor, transfer courses must be evaluated by a faculty member for both biology content and the level at which they were taught.

Microbiology Minor

Microbiology

College of Biological Sciences

- Program Type: Undergraduate minor related to major
- Requirements for this program are current for Fall 2012
- Required credits in this minor: 14

Microbiologists study the structure, function, and interaction of microbes, which make up 60 percent of the earth's biomass. Regarded by many as the foundation of the biosphere, microbes were likely the first form of life on earth, predating plants and animals by more than three billion years. Microbiologists study the role of microbes, such as bacteria, fungi, and viruses in our world. A key goal of microbiologists today is to find new ways to use microbes to our advantage, such as engineering bacteria to synthesize cancer drugs or clean up toxic waste sites.

Students completing the biology minor are not eligible for the microbiology minor.

Program Delivery

This program is available:
- via classroom (the majority of instruction is face-to-face)

Minor Requirements

Students who wish to declare a minor in microbiology can do so online at the College of Biological Sciences website.
